

Tile color = Jaccard similarity; number = shared top-100 marker genes

A heatmap visualization showing the distribution of Denyer clusters across different categories. The x-axis is labeled "Denyer cluster" and ranges from 0 to 14. The y-axis has labels 0 through 14 corresponding to each row. A color scale on the right indicates values ranging from 0.0 (dark purple) to 0.3 (yellow). Numerical values are displayed within each cell.
